

The assignment is due before 2:00 pm on the 18th of October (submission on D2L per dropbox).

We continue working on our Activity Tracker application (the same groups as before). The following tasks should be performed for assignment 2:

- Identify features of the system you are supposed to implement
- Provide a full description for one additional use case (priority based).
- Trace use cases back to their feature requirements using a traceability matrix.
- Using UML notation, describe the major conceptual classes in the system with their attributes and associations (create application domain model).
- Identify modules that are needed to handle the functionality of your system
- Implement a prototype of the GUI for your application.
